

MENHIR

Design by GRISVERD

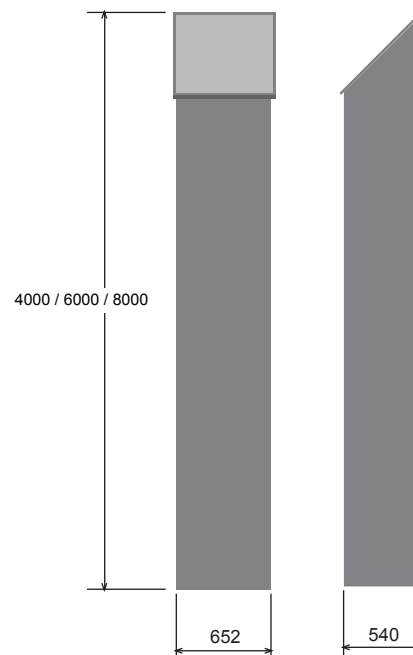

Description

Inspired in the form and robustness of megalithic constructions, the Menhirs are localisation and information columns where logos and texts can be overlaid and can be seen during the day by contrast and at night by means of backlighting. They generate the energy they consume and do not need to be connected to the grid. As a result of using corten steel, no treatment or maintenance of any kind is needed throughout their long-lasting useful life.

Technical documentation

Possibility to customise with logos and texts / Use of corten steel, no treatments or maintenance needed / LED backlighting / Vandal-proof. Dawn and dusk dimming.

TYPE	REF.	HEIGHT (mm)
Location-informational column	MEN-A1	4000
	MEN-A2	6000
	MEN-A3	8000
